README

🌍 Tourism Management Platform LK

A full-stack **MERN-based Tourism Management Platform** developed as part of the **IT2080 – Information Technology Project** at
Sri Lanka Institute of Information Technology (SLIIT).

This system centralizes all major travel-related services required by tourists visiting Sri Lanka into a single, secure, and user-friendly web application.

📌 Project Overview

Tourists often face difficulties when planning trips due to fragmented platforms for booking flights, hotels, transportation, adventure activities, and rental equipment. This project addresses that problem by providing a **single integrated solution** that simplifies travel planning, improves reliability, and enhances user experience.

The platform supports **multiple user roles**, **secure transactions**, **booking management**, and **administrative control**, making it suitable for both travelers and tourism service providers.

🎯 Objectives

- Provide a centralized tourism management system
- Reduce dependency on multiple third-party platforms
- Improve booking reliability and transparency
- Promote lesser-known tourist destinations in Sri Lanka
- Support local service providers (guides, drivers, vendors)
- Deliver a scalable, modular, and secure web application

✨ Core Features

👤 User Features

- User registration and authentication

- Search and browse destinations and adventure activities
- Book flights (with airline redirection)
- Reserve hotels and rooms
- Rent vehicles (self-drive or with driver)
- Purchase or rent travel accessories
- Secure online payments
- Booking history and order tracking
- Reviews and ratings

🛠️ Admin & Manager Features

- Role-based dashboards
- Destination & adventure activity management
- Vehicle, driver, and transport management
- Hotel and room management
- Flight listing and promotion management
- Accessory inventory and order management
- Booking reports and system analytics

👥 User Roles

Role	Responsibilities
Admin	System-wide management, reports, content moderation
User	Browse, book, pay, and review services
Transport Manager	Manage vehicles, drivers, and transport bookings
Flight Manager	Manage flight listings and promotions
Hotel Owner	Manage hotels, rooms, and bookings
Accessory Handler	Manage accessories, inventory, and orders

🧩 Subsystems

- **Flight Booking Subsystem**
- **Hotel Booking Subsystem**
- **Transport Management Subsystem**
- **Destinations & Adventures Subsystem**
- **Accessory Selling Subsystem**

Each subsystem is developed independently and integrated into the main platform.

🛠️ Technologies Used

Frontend

- React.js
- HTML5, CSS3
- JavaScript

Backend

- Node.js
- Express.js

Database

- MongoDB

Tools & Concepts

- MERN Stack Architecture
- RESTful APIs
- Agile Software Development
- UML Diagrams (Use Case, ER, Sequence, Activity)
- MVC Pattern
- Role-Based Access Control

📐 System Design

- Use Case Diagrams
- ER Diagram
- Class Diagram
- Sequence Diagrams
- Activity Diagrams
- Workflow Diagrams

All diagrams are included in the `diagrams/` directory.

🧪 Testing

Each subsystem includes:

- Functional test cases
- Validation testing
- Role-based access testing
- Booking and transaction verification

Test cases are documented in the **final project report**.

📄 Documentation

📘 **Final Project Report:**
`documentation/Final_ITP25_Kandy_10.pdf`

Includes:

- Requirement analysis
- Design diagrams
- Implementation details
- Testing & evaluation
- Conclusion & future enhancements

👨‍🎓 Project Team

Student ID	Name	Responsibility
IT23705838	M.M.C.H. Abayawardana	Accessory Selling Subsystem
IT23710238	D.W.K.R.S. Bandara	Flight Booking Subsystem
IT23654358	N.A. Jeewaraja	Destinations & Adventures
IT23658240	K.M.M.P.K Karunarathne	Hotel Booking Subsystem
IT23728844	M.D.A.K Mahagamage	Transport Management Subsystem

🚀 Future Enhancements

- Real-time availability updates
- GPS tracking for vehicles
- Multi-language and multi-currency support
- Push notifications
- Advanced analytics dashboards
